

Full-Stack Developer Task

Project: Build a Mini SaaS Dashboard

Objective Create a simple web dashboard where you can **list, filter, search, add** and **edit** projects. Each project needs at least these fields:

- Status (e.g. “active”, “on hold”, “completed”)
- Deadline
- Assigned team member
- Budget

Frontend Requirements:

- Utilize React or Next.js with a CSS framework like Tailwind
- Implement a responsive design featuring a table view with filtering and search capabilities by project status.
- Include a modal form to add or edit project details.

Backend Requirements:

- Develop using Node.js with Express or Next.js API routes.
- Store data in PostgreSQL or MongoDB.
- Implement RESTful or GraphQL endpoints.
- **Data seeding:**
 - You may generate your own dummy data, **or**
 - Fetch from a free public API (e.g. JSONPlaceholder, Mockaroo) and seed your database.
- **Endpoints:** Implement CRUD via **REST** or **GraphQL**

Easy Deployment Options

To speed up deployment, feel free to use:

- **Supabase** (PostgreSQL + auto-generated API)
- **Firebase** (Firestore + Cloud Functions)

Bonus Points:

- **Implement authentication (e.g., JWT or session-based).**
- **Use GitHub for version control and share commit history.**
- **Provide a brief README with setup and usage instructions.**

Deliverable: Submit a GitHub repository link within 7 days.

Evaluation Criteria

- **Code Quality:** Clarity, structure, and adherence to best practices.
- **Version Control:** Effective use of Git with meaningful commit messages.
- **Documentation:** Quality and comprehensiveness of README and code comments.
- **Functionality:** Completeness and correctness of the implemented features.

Bonus: Deployment, containerization, and any additional features beyond the requirements.
